1. Epitome & Sovereign Architectural Vision

The **FG178.5 Kernel ABI Freeze** establishes the constitutional execution contract for Wilsy OS. By locking public interface symbols, enforcing a mandatory 5-stage engine lifecycle (initialize, validate, execute, publish, shutdown), and embedding automated startup gatekeeping via **ABIValidator**, this milestone guarantees absolute backward compatibility and structural integrity. No engine bypasses governance or writes files directly; all subsystems build upon an immutable, versioned foundation.

"And he shall be like a tree planted by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither; and whatsoever he doeth shall prosper." — **Psalms 1:3**
