1. Epitome & Sovereign Architectural Vision

The **FG195 Distributed Dashboard** brings live, Kubernetes-like cluster telemetry to Wilsy OS. It provides real-time oversight of worker node health, CPU and memory utilization, queue lengths, task latency, active/completed tasks, failure rates, and artifact catalogs. Built on top of the frozen Kernel ABI, it guarantees non-blocking, highly resilient operational observability across sovereign infrastructure.

"And he shall be like a tree planted by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither; and whatsoever he doeth shall prosper." — **Psalms 1:3**
