1. Epitome & Sovereign Architectural Vision

The **FG201 Prediction Engine 2.0** shifts Wilsy OS from retrospective reporting to proactive intelligence. Moving past simple retrospective queries, it computes forward-looking probability vectors to anticipate next bottlenecks, likely build failures, emerging security issues, expected technical debt, performance regressions, and architecture drift before they manifest in production.

"And he shall be like a tree planted by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither; and whatsoever he doeth shall prosper." — **Psalms 1:3**
