1. Epitome & Sovereign Architectural Vision

The **FG203 Execution Planner** automates the translation of sovereign decisions into deterministic, sequential execution pipelines without requiring user intervention. Following strict architectural demarcation, this milestone certifies the fully operational local execution compiler (Run Quality \$ ightarrow\$ Run Review \$ ightarrow\$ Publish Report \$ ightarrow\$ Notify Dashboard), while cleanly separating it from long-term roadmap distribution targets[cite: 6]. Every execution plan is cryptographically bound to kernel safety gates.

"And he shall be like a tree planted by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither; and whatsoever he doeth shall prosper." — *Psalms* 1:3
