1. Epitome & Sovereign Architectural Vision

The **FG207 Engineering Operating System Kernel** completes Phase V of Wilsy OS. At this stage, Wilsy OS stops being a legal-document application and becomes a total Engineering Execution Platform for engineering organizations. Everything becomes an engine, observable, replayable, governable, explainable, and auditable. Wilsy OS ceases selling software modules and delivers an enterprise execution platform.

"Autonomous intelligence without deterministic verification is chaos; within Wilsy OS, it is sovereign operational precision." —
Wilson Khanyezi, Founder & Chief Architect, Wilsy OS
